## Bimar & Cano – Cerno

November 6, 2019

As the year comes to an end and the weather is cooling down, Cerno is warming things up with two new accent pendants, Bimar and Cano.

Built of one-inch thick solid hardwood, the Bimar showcases the beauty of the natural wood grain. Eight faceted sides compose a design that works well in a modern or transitional space. The combination of natural wood and glowing sphere lamp warms up any environment.

Designing with LEDs often lends itself to hiding, or using a low profile light source. The Cano pendant does the opposite; the lamp is an integral part of the design. The solid hardwood faceted body can be enhanced further when paired with a spherical glowing lamp.
