

ENERGY HEROES

The latest LED fixtures not only reduce electricity costs, but are available in stylish designs that rival incandescent and fluorescent models.

<<ÉLAN

The arms on the Charter Collection fixtures can be moved however the end-user prefers. LED illumination is emitted from each faux wood plank to position light exactly where it is needed. Polished Nickel accents completes the Mid-Century Modern aesthetic. The collection includes a chandelier as well as a wall sconce. www.elan-lighting.com

^ CERNO

Designed and made in California, the Lenis linear luminaire debuted at ICFF and represents an aesthetic deviation for the company by featuring softer lines with more pronounced curves. The design has personal meaning to the three founders, who fondly recall building a boat together as childhood friends 23 years ago in one of their Southern California backyards. The Lenis pays homage to their friendship, roots, and passion for the ocean. The team's shared love for surfing, sailing, and spending time at the beach inspired the structure and form of this light. The fixture is constructed of precisely bent elements wrapped in form-fitting fabric to resemble a boat hull, but with a subtle twist. www.cernogroup.com

<<FOCAL POINT

An extension to the trimless ID+ Downlights family, the new ID+ 3.5- and 4.5-inch cylinders have matching apertures. Available in suspended and surface-mounted options, the fixtures are comprised of a single-piece, die-cast reflector with a knife edge and a decorative reveal. These ID+ cylinders provide a host of design possibilities with a glowing and non-glow reveal, Matte Black, Matte Satin White, or Palladium Silver exterior finish options or custom RAL colors with two cone choices: 50- and 80-percent cut-off, and a selection of distributions from spot to super-wide flood.

This energy-efficient luminaire also accommodates design changes in the field, with a field-changeable reflector and optic using a simple twist & lock mechanism. www.focalpointlights.com

<<CP LIGHTING

Designed by Christopher Poehlmann, the organically themed P3d series Leaf Nouveau pendant pairs a 3-D printed nylon shade with an aluminum body and 5-watt LED. The leaf shade can be ordered in Green or White and the post length may be customized to suit a particular installation. The pendant comes with a dimmable, 12vDC LED module; however, a non-dimming 120v module is available by request. www.cplighting.com

^ KUZCO

The Oxford pendant features a lightly textured cylinder with elongated perforations along the central black aluminum casting. It emits LED light from a 45-degree integrated reflector for subtle illumination. www.kuzcolighting.com
