The Cerno Levo LED sconce is a premium bedside light design that will provide users with a way to keep essential illumination nearby along with charging connectivity. Designed by Nick Sheridan, the light unit consists of a panel that will softly diffuse illumination into a space when activated as well as targeted lighting thanks to a built-in swiveling arm component.

The wall-mounted light also features a built-in USB port that will keep essential charging connectivity within reach to let users power up their smartphone and other devices as they rest. The Cerno Levo LED sconce is crafted with premium materials including timber and aluminum, and also features a built-in shelf that offers the perfect place to rest devices or other bedside essentials.
